Task 4: IAM Policies, Secure Storage, and Data Encryption

⊘Objective:

Implement and demonstrate key AWS security features including:

- IAM policy creation and enforcement
- S3 bucket-level access control
- Server-side data encryption

IAM Policy:

- Created an IAM user: IAM-user
- Attached custom policy allowing limited access to abdul2000.bucket
- User can only perform GetObject and PutObject on that bucket

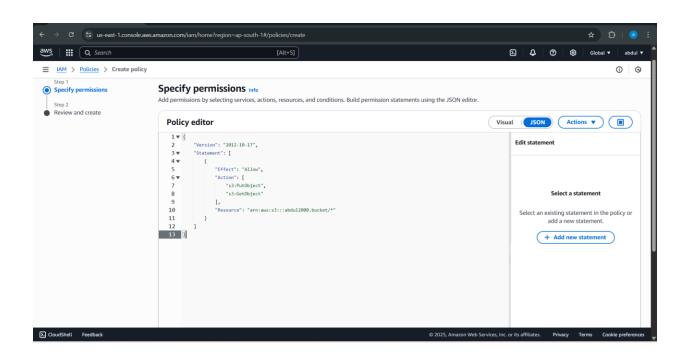

Secure Storage Setup (S3):

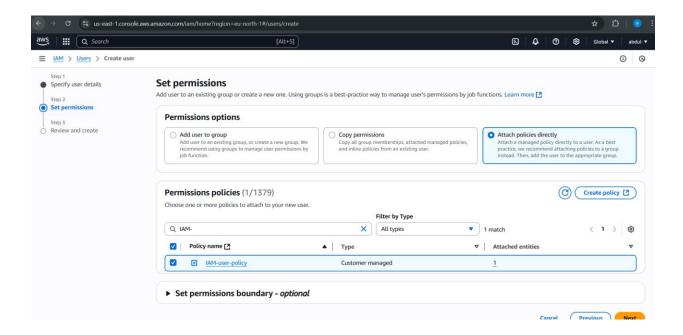

- Created a private S3 bucket: abdul2000.bucket
- Blocked all public access
- Uploaded sample file: document.txt

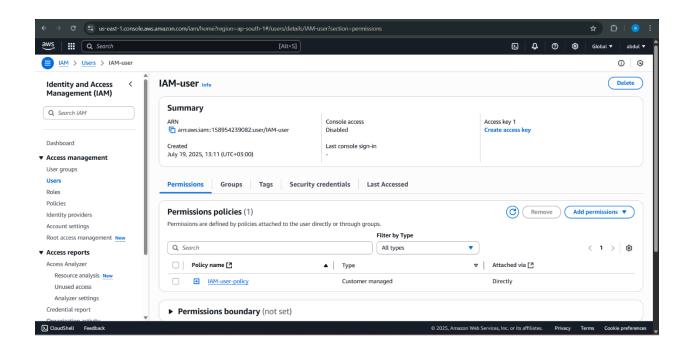

Data Encryption:

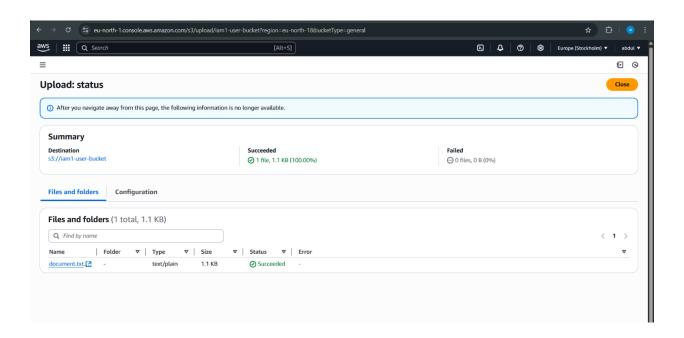

- Enabled AES-256 encryption at rest for all objects
- Verified encryption in the object metadata
